RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 70 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1855 Excerpt: . . . acquires a high temperature and gives off deleterious fumes; when this takes place, the action of the battery should be arrested. This battery, for almost every purpose, is the most powerful that has yet been constructed. About half a dozen cells, with a platinum surface in each of ten square inches, will be found sufficiently powerful for performing all the most interesting experiments connected with voltaic electricity. Bunsens Battery differs from Groves only in charcoal being substituted for the platinum. The cells of this battery have the cylindrical form, represented in fig. 57. , in consequence of the carbon or charcoal being best made in the form of Fig. 57. hollow cylinders. The strip of copper A B, shows how the zinc of one cell is united with the carbon cylinder of the succeeding cell; and so on. The figure also shows how the strips of copper c and D, forming the poles of the battery, are connected with the extreme cells of the battery. Each charcoal cylinder, usually carries a collar of copper at its upper end for the purpose of fixing the connecting strip of copper to it; this copper stands above the glass vessel so as not to come in contact with the nitric acid; however, it is found that, owing to the porous nature of the charcoal, the acid, to a certain extent, rises to the copper collar, and in time destroys its efficiency. The following contrivance, see. fy. 58. , completely...
