Not illustrated. 1807 Excerpt: . . . the tides, beneath the sand, in such places where the water is left, at the depth of about a foot; and is in some places dug out, and in. others drawn up by means of a hook contrived Description by the late Dr. Garden for that purpose. They are commonly used as baits for other fish, but they are also very delicate eating. These fish are found in the stomach of the porpess; an argument that the last roots lip the sand with its nose, as hogs do the ground. THE ELECTRIC OR NUMBING EEL, OR GYMNOTUS. OF this extraordinary fish, which bears a great resemblance both in shape and colour to the common eel, the following very accurate description was given by the late Dr. Garden, of Charlestown, in South Carolina: The largest of these fish was three feet eight inches in length, when...
