Brand New Book ***** Print on Demand *****.Excerpt from A Systematic Qualitative Chemical Analysis a Theoretical and Practical Study of Analytical Reactions of the More, Common Ions of Inorganic Substances The author believes that a course in Qualitative Analysis should not only train the student in accurate and careful manipulation and so prepare him for the more careful work necessary in Quantitative Analysis, but should also serve to extend and supplement his knowledge of General and Theoretical Chemistry. To this end an attempt has been made to present the theoretical and practical parts in such a way that the student will understand the significance and see the practical applications of the theoretical part. The book has been divided into four parts, including the Appendix. Part I consists of the Introduction and Laboratory Suggestions. In the Introduction is given a brief discussion of the Ionic Theory and Law of Mass Action, as applied to the principles involved in Qualitative Analysis, and reference to its various sections is made throughout the text. Part II consists of Preliminary Experiments, Method of Analysis, Discussion and Review Questions on the metal ions. In order that the student may get a comparative idea of the actions of the different metal ions in a group toward a given reagent, the Preliminary Experiments are arranged in a manner which differs somewhat from the usual one and in order that he may not be confused by too many reactions, only those reagents used in the Method of Analysis are employed. Preliminary Experiments whose reactions may not be clear are followed by Notes. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
