Physical Geography is the geography of the natural world. The first essential in a study of the truths which it embodies is an adequate conception of the way in which Land and Water are distributed over the surface of the globe. The Land may be regarded under three aspects - 1st, Position and comparative extent; 2d, Contour or shape; 3d, Superficial aspect, or form of relief. The first and second of these points of view are illustrated in the delineations afforded by the Map itself; in the case of the third, the appended Table (of high-land and low-land regions) serves as a supplement to the Map, and supplies such deficiencies as are inherent to it. The Map of the World delineated on the plane of a meridian 20 west of Greenwich exhibits an Eastern and a Western Hemisphere, and shows admirably the respective grouping of the land-masses that constitute the Old and the New Worlds. The Old World is of the larger extent, and the more solid in shape. But this single illustration is not sufficient. The land and water must be viewed also under the conditions of a Northern and a Southern Hemisphere, as in the case of the smaller appended map, in the...
